

1 GAME OVERVIEW

Objective: build the highest-scoring jewelry display by grouping matching colors and animals.
2-4 players • About 30 minutes • Light strategy
Each player builds up to 13 tiles. Score printed bonuses, connected color groups, connected animal groups, and leftover tokens.

2 SETUP CHRONOLOGY

- 1. A. Place the price board in the center.
 - 2. B. Sort resource and Ankh tokens into six supply piles: 4 each with 2 players, 5 each with 3, or 6 each with 4.
 - 3. C. Shuffle 55 tiles into two facedown draw piles.
 - 4. D. Shuffle 15 price markers and place one on each marked price-board space. Avoid three identical prices in a row.
 - 5. E. Choose either draw pile; reveal 6 tiles and place them left to right below the board.
 - 6. F. Put the 12 bonus tokens within reach.
 - 7. G. Randomly choose the start player.
- Reminder: unused resource and Ankh tokens return to the box.

3 STRUCTURE OF A TURN

OPTIONAL ANKH ACTIONS

Spend any number of Ankh tokens, one at a time, to refresh the market or move a tile.

MAIN ACTION - CHOOSE 1

Take any 3 tokens, or buy 1 market tile by paying the prices above it.

PLACE / RESOLVE

Place a bought tile legally. Resolve warehouse, scribe, +2 tile, and any new group-of-5 bonus.

OPTIONAL ANKH ACTIONS

Spend more Ankh tokens after the main action, if desired.

HAND LIMIT CHECK

Return excess tokens: maximum 5 resource tokens and 2 Ankh tokens.

4 TABLE SETUP

Market row and component placement reference

SETUP LEGEND

- 1 Price board
 - 2 Resource and Ankh supply
 - 3 Two tile draw piles
 - 4 Random price markers
 - 5 Six faceup market tiles
 - 6 Bonus tokens
- Player area: leave room for a 13-tile structure.

1 KEY MECHANICS / RULES REFRESHER

TAKE TOKENS

- Take any 3 tokens from the supply, including duplicates and Ankh tokens.
- End-turn limits: 5 resource tokens and 2 Ankh tokens.

BUY & PLACE

- Pay the exact resource colors shown above the chosen market tile.
- Your first tile starts your display. Later base tiles must be orthogonally adjacent; diagonals do not connect.
- An upper tile must rest on 4 base tiles and match at least 1 base tile's color. It costs 1 fewer resource of your choice.

SPEND ANKH: REFRESH

- In a 2-player game, remove the leftmost market tile; skip this removal with 3-4 players.
- Shift remaining tiles left, choose either draw pile, then refill left to right.

SPEND ANKH: MOVE A TILE

- Move a base tile only if it supports no upper tile; place it adjacent to at least 1 base tile.
- Move an upper tile onto 4 supporting base tiles. When moving, ignore the color-match requirement.

SPECIAL TILES

- Warehouse: immediately place a matching resource token on it. Use/refill that token as extra storage while uncovered.
- Scribe: immediately take another turn.
- +2 tile: adds 2 points during final scoring.

GROUP BONUSES

- When a connected group reaches 5+ tiles of one color, claim a color bonus token.
- When a connected group reaches 5+ of one animal, claim an animal bonus token.

2 SCORING SUMMARY

Printed points: add all claimed 3-point bonus tokens and all +2-point tiles.
Animals: +1 per tile in each connected group of 2+. Score jackals, beetles, and falcons separately. Singletons score 0.
Colors: +1 per tile in each connected group of 2+. Score black, white, blue, green, and red separately. Singletons score 0.
Leftovers: +1 point for every complete set of 3 remaining tokens, counting resources and Ankh tokens together.

3 STRATEGIC TIPS

GOOD HABITS

- Build toward both a color group and an animal group when possible.
- Keep token choices flexible for several market positions.
- Use upper tiles for discounts without breaking valuable base groups.

COMMON MISTAKES

- Diagonal tiles are not adjacent.
- Do not cover a warehouse you still need for storage.
- Check hand limits only at the end of the turn.

COMPETITIVE TIPS

- Watch opponents' token holdings before refreshing the market.
- Time the 13th tile so your final purchase improves more than one scoring category.

4 END OF GAME

Trigger: a player places a 13th tile.
Equal turns: every player receives the same number of turns.
Then total printed points, animal groups, color groups, and leftover-token sets.
Highest score wins. On a tie, the tied players share the victory.
