

1. GAME OVERVIEW

- A two-player civilization game played across three Ages.
- Win immediately through Military Supremacy or Scientific Supremacy. If neither occurs, score victory points after Age III.
- On each turn, take one available card from the current card structure and use it in one of three ways.

2. SETUP CHRONOLOGY

- Place the board between the players. Put the conflict pawn on the central space and military tokens on their marked spaces.
- Randomly select 5 Progress tokens and place them face up on the board. Prepare the Age decks and remove the required cards as directed by the rulebook.
- Each player receives 7 coins. Select and draft Wonders so each player has 4 Wonders.
- Build the Age I card structure with face-up and face-down cards in the prescribed pattern.

3. TYPICAL TABLE SETUP

4. TURN SEQUENCE

- Choose one available card. A card is available only when no other card overlaps it.
- Use the selected card to construct its building, discard it for coins, or build one of your unbuilt Wonders.
- After removing the card, turn any newly uncovered face-down cards face up.
- Players alternate turns until the structure is empty. The player indicated by the military position chooses who begins the next Age.

5. BUILDING, TRADE & WONDERS

- Pay the card cost using your production and coins. Chain symbols may allow a building to be constructed free.
- To buy a missing resource, pay the bank 2 coins plus 1 additional coin for each matching resource symbol produced by the opponent.
- To build a Wonder, place the chosen card face down beneath an unbuilt Wonder and pay the Wonder cost. Resolve its effect immediately.
- Only 7 Wonders can be built during the game.

6. MILITARY

- Each shield moves the conflict pawn one space toward the opponent.
- Crossing a military token causes the opponent to lose the indicated coins.
- Reach the opponent capital space to win immediately by Military Supremacy.

7. SCIENCE & PROGRESS

- Each pair of identical science symbols lets you take 1 available Progress token.
- Collect 6 different science symbols to win immediately by Scientific Supremacy.
- Green buildings also score points if the game reaches final scoring.

8. FINAL SCORING

- If no supremacy victory occurs, add points from military position, buildings, Wonders, Progress tokens, and coins.
- Every 3 coins are worth 1 victory point.
- Highest score wins. Use the civilian-building tie-breaker stated in the rulebook.

QUICK DECISION CHECK

Before taking a card: What will it uncover? Can the opponent use the revealed card for military or science?

Compare the card as a building, a coin discard, and a Wonder trigger before committing.
