

1. GAME OVERVIEW

- Players: 3-7. Develop a civilization through three Ages by drafting and playing cards simultaneously.
- Build resources, commerce, military, science, civic structures, guilds, and Wonder stages.
- After Age III, the player with the most victory points wins.

2. SETUP CHRONOLOGY

- Give each player a Wonder board and 3 coins. Choose which Wonder side to use.
- Separate the Age I, II, and III cards. For each Age, use only cards matching the player count.
- For Age III, add the required number of randomly selected Guild cards, then shuffle that deck.
- Shuffle each Age deck separately. Deal 7 Age I cards to every player.

3. TYPICAL TABLE SETUP

4. AGE AND TURN SEQUENCE

- Choose 1 card from your hand and place it face down. Reveal chosen cards simultaneously.
- Use the chosen card in one of three ways: construct the structure, build the next Wonder stage, or discard it for 3 coins.
- Pass the remaining hand left in Ages I and III; pass right in Age II.
- Repeat until each player has played 6 cards. Discard the unplayed seventh card, unless an effect says otherwise.
- Resolve military conflicts at the end of each Age.

5. BUILDING AND COMMERCE

- To construct a card, produce or buy every resource shown in its cost. Some structures may be built free through a chain symbol.
- Buy one resource from an immediate neighbor for 2 coins unless a commerce effect reduces the price. Coins go to that neighbor.
- A player may buy only resources produced by brown or gray cards and the starting Wonder resource, not resources from yellow cards.
- A player may not construct two structures with the same name.

6. CARD COLORS

- Brown: raw materials. Gray: manufactured goods.
- Yellow: commerce and coins. Blue: direct victory points.
- Red: military shields. Green: science symbols.
- Purple: Guild scoring, used in Age III.

7. MILITARY & SCIENCE

- Military: compare shield totals with each neighbor after every Age. Gain the Age victory token for each win; take a -1 defeat token for each loss.
- Science: score 7 points per set of three different symbols, plus the square of the count of each matching symbol.

8. FINAL SCORING

- Add military tokens, coins, Wonder stages, civic structures, commerce effects, Guilds, and science.
- Every 3 coins are worth 1 victory point.
- Highest total wins. If tied, the tied player with the most coins wins; otherwise, share the victory.

QUICK DECISION CHECK

Before choosing: Can the card be built? Is a resource purchase affordable? Is the card more useful as a Wonder stage?

Also watch both neighbors: their resources affect trade, and their shields determine military results.
