

1. GAME OVERVIEW

- Players: 2-4. Goal: finish 9 rounds with the most victory points.
- Draw ingredient chips from your bag to advance around your pot. Stop before white cherry-bomb chips total more than 7.
- Your scoring space is the open space directly after your last placed chip. It determines coins and victory points.

2. SETUP CHRONOLOGY

- Choose a start player. Shuffle Fortune Teller cards. Put the scoring track in the center, Flame on round 1, and 0/50 seals on their spaces.
- Lay out orange and black books. Choose one matching set of green, blue, red, yellow, and purple books. Begin with green, blue, and red; reveal yellow in round 2 and purple in round 3.
- Sort ingredient chips by color and value. Each player takes a pot, bag, scoring marker, droplet, flask, and rat stone.
- Place droplet on pot space 0, full flask on its trivet, and rat stone on its trivet. Starting bag: four white 1, two white 2, one white 3, one orange 1, and one green 1.

3. TYPICAL TABLE SETUP

Central supply and scoring track;
individual pots, bags, flask, and chips.

4. STRUCTURE OF A ROUND

- 1) Reveal and resolve the Fortune Teller card.
- 2) From round 2 onward, all trailing players count rat tails between their marker and the leader, then place the rat stone that many spaces beyond the droplet.
- 3) Potions: draw and place chips simultaneously. Move forward by each chip value. After each draw, stop or continue. Never look inside the bag.
- 4) Evaluate in order: bonus die; black/green/purple effects; rubies; victory points; buy chips; spend rubies and reset.

5. KEY MECHANICS

- Explosion: if drawn white-chip values total 8 or more, stop immediately. Colored chips never count toward explosion.
- Flask: return the most recently drawn white chip to the bag, unless that chip caused an explosion. Flip the flask to empty.
- Exploded pot: still receives rubies shown. Choose either victory points or buying chips, not both. No bonus-die roll.
- Buying: spend the coin value of the scoring space on 1 or 2 chips. If buying 2, they must be different colors. Unspent coins are lost.

6. SCORING SUMMARY

- Highest non-exploded scoring space rolls the bonus die; tied leaders each roll.
- All players gain a ruby if the scoring space shows one.
- Non-exploded players take both victory points and shopping. Exploded players choose one.
- At pot space 33, score 15 VP and shop with 35 coins.

7. STRATEGIC TIPS

- Track the white-chip total already drawn before pressing your luck.
- Improve the bag with stronger colored chips while limiting weak purchases.
- Use 2 rubies to advance the droplet or refill the flask. Both improve future rounds.
- Rat tails help trailing players catch up, so a lead can shrink quickly.

8. ROUND MILESTONES

- Round 2: reveal yellow book.
- Round 3: reveal purple book.
- Round 6: every player adds one white 1-chip to the bag.
- Round 9: draw simultaneously on the start player's "Stir!" command.

END OF GAME

- After round 9, convert 5 coins or 2 rubies into 1 victory point as often as possible.
- Most victory points wins. If tied, the tied player who reached farther in the pot during round 9 wins; if still tied, share the win.
