

1. GAME OVERVIEW

- Players: 1-5. Build an aviary engine over 4 rounds and finish with the most victory points.
- Habitats drive the three core resources: forest gains food, grassland lays eggs, and wetland draws bird cards.
- Score bird points, bonus cards, end-of-round goals, eggs, cached food, and tucked cards.

2. SETUP CHRONOLOGY

- Shuffle bird cards; place the deck beside the tray and reveal 3 face-up birds. Place eggs and food in a shared supply. Roll all 5 food dice into the birdfeeder.
- Choose a goal-board side. Randomly place 1 goal tile in each of the 4 round spaces. Shuffle the bonus-card deck.
- Each player takes a player mat and 8 action cubes, then receives 5 bird cards, 5 food tokens - 1 of each type - and 2 bonus cards.
- Keep any number of the 5 bird cards, discarding 1 food token for every bird kept. Keep 1 bonus card. Randomly choose the first player.

3. TYPICAL TABLE SETUP

4. TURN STRUCTURE

- On your turn, place 1 action cube to take exactly 1 action: Play a Bird, Gain Food, Lay Eggs, or Draw Bird Cards.
- Play a Bird: pay its food cost, plus the egg cost shown above the destination column. Place the bird in the leftmost open space of its matching habitat. Resolve any “when played” power.
- Habitat action: place a cube in the leftmost exposed action space, take that benefit, then move the cube right-to-left and activate each brown power in that row.
- Turns continue clockwise until all players have used every remaining action cube.

5. CORE ACTIONS & POWERS

- Gain Food: select dice from the birdfeeder one at a time. If all remaining dice show the same face, reroll all 5 dice first.
- Lay Eggs: place eggs on birds without exceeding each bird’s nest capacity.
- Draw Birds: take face-up cards or draw from the deck. Chosen face-up cards are replaced only after the turn ends.
- Powers: brown activates during its habitat action; pink may trigger once between your turns; white resolves when the bird is played.

6. ROUND END

- After every player uses all available action cubes, score the current end-of-round goal.
- Place 1 action cube on the goal board for that round. This cube is unavailable in later rounds.
- Discard the 3 face-up bird cards and reveal 3 new cards.
- Pass the first-player token clockwise. Rounds therefore have 8, 7, 6, then 5 actions per player.

7. SCORING

- Add printed points on all played bird cards.
- Add completed bonus-card points and end-of-round goal points.
- Score 1 point for each egg on a bird, each food token cached on a bird, and each bird card tucked under a bird.
- Highest total wins. Ties are broken by unused food tokens; if still tied, share the win.

8. QUICK STRATEGY

- Build complementary bird powers in the same habitat to improve each future action.
- Balance birds, food, eggs, and cards so one missing resource does not stall the engine.
- Plan for round goals early, but compare their points with long-term engine value.
- Eggs are both a playing cost and end-game points, so leave enough capacity.

IMPORTANT REMINDERS

- Food can be substituted at a rate of any 2 food tokens for 1 food of another type when paying a bird cost.
- You may decline a benefit, but not a required cost. Check the appendix when a specific bird power needs clarification.
