

1 GAME OVERVIEW

Objective: Keep your ship sailing while avoiding the board edge and roaming daikaiju. The last ship remaining wins.

- Players: 2-8
- Play time: about 20-40 minutes
- Style: light strategy, path building, high interaction
- Win: last surviving ship; simultaneous final survivors share the win

2 SETUP CHRONOLOGY

- 1 **Board & ships**
Place the board centrally. Each player chooses one ship.
- 2 **Wake deck**
Shuffle the 56 wake tiles. Deal 3 face down to each player; stack the rest as the draw pile.
- 3 **Daikaiju deck**
Shuffle the 10 monster tiles face down.
- 4 **Place monsters**
Roll gold for the top coordinate and blue for the left coordinate. Re-roll duplicate spaces. Randomly rotate, then reveal.
- 5 **Monster count**
2-4 players: 6 | 5-6 players: 5 | 7-8 players: 4.
- 6 **Choose starts**
Oldest player starts. In turn order, place every ship on a different white edge mark before any wake tile is played.
- * Reminder: Keep Wake and Daikaiju draw piles accessible.

3 STRUCTURE OF A TURN

PHASE 1
Roll gold + blue. On 6, 7, or 8, resolve every daikaiju in ascending rotation-number order.

PHASE 2
Place 1 wake tile in the open square directly ahead of your ship. Rotate freely, but follow placement restrictions.

PHASE 3
Move your ship, plus every connected ship, along continuous wakes to each open end.

PHASE 4
If still afloat, draw back to a hand of 3 wake tiles.

CHECK FIRST
If fewer than 3 daikaiju remain, place new ones to restore 3. Skip the movement roll that turn.

4 SETUP VISUAL

Top-down example: board, ships, tiles, dice, and player hands

1 KEY MECHANICS / RULES REFRESHER

DAIKAIJU MOVEMENT

Roll both dice. A total of 6, 7, or 8 activates all monsters. Resolve lowest rotation number first; gold-arrow monster wins a tie. For each monster, roll 1 die: 1-5 follows that numbered arrow; 6 adds a new daikaiju at rolled coordinates instead of moving.

MONSTER COLLISIONS

Off board: remove the monster. Into a wake tile: remove that tile to the bottom of the draw pile; any ship on it is eliminated. Into another monster: remove the stationary monster. Adjacent to the active ship with no tile-placement escape: eliminate that ship.

WAKE PLACEMENT

Place only in the open square ahead of your ship. Rotate any direction. Unless no legal alternative exists, do not send your own ship off-board, into an endless loop, or into a daikaiju. Never make two ships travel the same wake in the same direction.

SHIP MOVEMENT

After placement, move all ships connected by the new tile to their open wake ends. Ships traveling opposite directions pass safely. A ship is eliminated when its open wake reaches the board edge or a daikaiju.

ELIMINATION BONUS

If your tile eliminates opponents, you may exchange any number of tiles in your hand for the same number from eliminated players. Put unclaimed tiles beneath the draw pile; then draw normally.

EASY-TO-FORGET

Always maintain at least 3 daikaiju. New monsters can remove occupied wake tiles immediately. A placed wake tile stays unless destroyed. Draw only if your ship remains in play.

2 SCORING SUMMARY

Tsuro of the Seas has no victory points.

- During game: no points, bonuses, or penalties are recorded.
- Your only objective is survival.
- End game: last ship on the board wins.
- Tie: remaining ships share the win if the board fills, or if the final placement eliminates them simultaneously.

3 STRATEGIC TIPS

GOOD HABITS

- Keep multiple safe exits in hand.
- Track which monster activates first.
- Check every connected ship before placing.

COMMON MISTAKES

- Planning before monsters move.
- Creating a loop or forced board exit.
- Forgetting a new tile can move opponents.

COMPETITIVE TIPS

- Steer rivals toward crowded edges.
- Preserve flexible, sharply turning tiles.
- Use elimination exchanges to improve your hand.

4 END OF GAME
